

EASTERN HIGHLANDS PROVINCE: DIOCESE OF GOROKA

OVERVIEW

Goroka Diocese erected on June 18 1959 established in 1966 is the catholic headquarters in Eastern Highlands Province. All catholic services are governed by the Bishop. Catholic Church Health Services is managed by a Health Manager who carries out all national health policies and plans under the guidance of the diocese health board. This profile shows a map with CCHS facilities situated in the province and the type of facilities with catchment population figures, it shows facilities registered and pending registration, number of staff and designations. The diocese health infrastructure gives an insight to what resources the facilities has and supports health in that district. The second part of the profile shows CCHS health data on outpatient, ante-natal, measles, facility births, outreach and pneumonia. The data provides insight into how CCHS is performing with as per its reports in the 2019 National Information System (NHIS). All the information on this profile are based on 2019 NHIS, HIV SURV and CCHS Biodata.

HEALTH STAFFING

FACILITY INFRASTRUCTURE

Tafeto and Yamiyufa in Daulo with two facilities. Pundibasa in Obuna Wanenara with one facility. Tafeto and Yamiyufa is accessed by road and bushtrack. Pundibasa The facility is accessed by road, bush-track. There is no mode of transport for the facility as yet.

Daulo, both facilities have network coverage and use cell phones as a means of communication. No VHF radio is available at either facility. Ombuna-Wanenara, Pundibasa there is network coverage and the use of cell phones for communication but no VHF radio present at the facility.

Daulo, septic toilets are present at both facilities complete with wash basins but no running water supply into the building. A rain catchment system is in place for staff and patients. Pundibasa aid post: septic and open pit toilets are present together with handwash basins and running water supply into the building. Also, a rain catchment system for back up water is present.

FACILITY INFRASTRUCTURE

Daulo district, 1 out of the 2 facilities, has a cold chain system in place for vaccine storage. Obuna-Wan-inara district, due to the shortage of a power, there is no cold chain system at the facility.

Daulo, both facilities have power supply but no generator in place.. No incinerator is installed in either facility rather they use an open pit to burn of waste material. Pundibasa has no running power supply into the building and no backup generator. There is only the use of solar power as the main source of electricity. No incinerator is present at the facility.

HEALTH DATA

Outpatient

1.60

Number of out-patients visits made by individuals during the course of a year. More than 2 visits per person per year is an indication that there is demand on accessibility and utilisation of health care services

Measles & Vaccine

47 %

Percentage of children under one year who have received 9-11 months dose of measles vaccine. Measles is the leading cause of childhood mortality from vaccine preventable disease. Provinces should aim to reach 80% and above to prevent future disease outbreaks.

Facility Births

NA

The percentage of births that occur in a hospital and health centre. Access to skilled care during pregnancy and child birth prevents maternal and newborn deaths

Antenatal

47 %

The percentage of pregnant women that attended at least one antenatal visit at a hospital, health centre or outreach clinic. This prepares a woman and her families for a safe child birth.

Pneumonia

NA

The percentage of children under 5 years who die from pneumonia- good quality care (early and effective use of antibiotics) would minimise these deaths.

Outreach Clinic

8

Number of outreach clinic per 1000 population under five years . Rural outreach provides an indication for preventative child healthcare and provinces should reach over 50
