

NATIONAL CAPITAL DISTRICT: ARCHDIOCESE OF PORT MORESBY

OVERVIEW

The Port Moresby Metropolitan Archdiocese erected on May 10 1889 and established in 1966 is the catholic headquarters in the National Capital District. All catholic services are governed by the Bishop. Catholic Church Health Services is managed by a Health Manager who carries out all national health policies and plans under the guidance of the diocese health board. This profile shows a map with CCHS facilities situated in the province and the type of facilities with catchment population figures, it shows facilities registered and pending registration, number of staff and designations. The diocese health infrastructure gives an insight to what resources the facilities has and supports health in that district. The second part of the profile shows CCHS health data on outpatient, antenatal, measles, facility births, outreach and pneumonia. The data provides insight into how CCHS is performing with as per its reports in the 2019 National Information System (NHIS). All the information on this profile are based on 2019 NHIS, HIV SURV and CCHS Biodata.

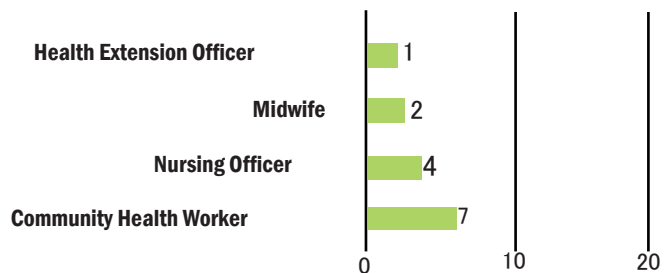

FACTS

- Population coverage for health services in the Archdiocese of Port Moresby 40 750
- 1 BMU site in Port Moresby Archdiocese
- 28 Beds in the St Pauls and St Therese Health facilities
- 604 patients receiving HIV & Care and Treatment

TYPES OF FACILITY

Type	Number of Facilities	Registered	Pending Registration
Urban Clinic	2	2	
VCCT			

HEALTH STAFFING

FACILITY INFRASTRUCTURE

There are two urban clinics in the NCD district. Both facilities don't have a mode of transport, however both are strictly accessible via road only.

Both facilities have network coverage and communication is via cell phones as neither facility has functioning VHF radios.

There are working septic toilets together with fixed wash basins at both facilities but no open pit toilets. There is running water supply but no rain catchment system. And no backup tanks for water storage.

FACILITY INFRASTRUCTURE

Both facilities have working cold chain systems for the storage of vital vaccines.

There is power supply into both buildings together with backup generators. Both facilities however don't have solar power equipment nor incinerators for the burning of biohazardous waste material.

HEALTH DATA

Outpatient
0.54

Number of out-patients visits made by individuals during the course of a year. More than 2 visits per person per year is an indication that there is demand on accessibility and utilisation of health care services

Measles & Vaccine
52%

Percentage of children under one year who have received 9-11 months dose of measles vaccine. Measles is the leading cause of childhood mortality from vaccine preventable disease. Provinces should aim to reach 80% and above to prevent future disease outbreaks.

Facility Births
NA

The percentage of births that occur in a hospital and health centre. Access to skilled care during pregnancy and child birth prevents maternal and newborn deaths

Antenatal
73%

The percentage of pregnant women that attended at least one antenatal visit at a hospital, health centre or outreach clinic. This prepares a woman and her families for a safe child birth.

Pneumonia
NA

The percentage of children under 5 years who die from pneumonia- good quality care (early and effective use of antibiotics) would minimise these deaths.

Outreach
0

Number of outreach clinic per 1000 population under five years. Rural outreach provides an indication for preventative child healthcare and provinces should reach over 50

Outpatient services is one of the main health services CCHS centres provide in its facilities. This picture is the out patient waiting area for St Pauls Gerehu,

HEALTH SERVICES PROVIDED
